PROFESSIONAL SUMMARY

Full-stack developer and UI/UX engineer with production experience shipping web and mobile products at a digital product agency: a React Native finance app, dashboard overhauls and design systems for multi-tenant SaaS platforms, and AI-powered features. Built and maintained UI across React, Next.js (App Router), TypeScript and React Native codebases using Tailwind CSS, Supabase and REST APIs. Comfortable owning features end-to-end, from responsive layout and design-system consistency through backend integration. Currently based in Noida; originally from Ahmedabad. Open to relocation.

WORK EXPERIENCE

Garage Collective - Noida, India *| Feb 2026 - Present*

Promoted from AI Trainee to Junior Developer, UI/UX

- Built and shipped a finance mobile app with React Native and Expo, the Android companion to a client-profitability and cash platform for service businesses: role-based home screens, a finance inbox with swipe-to-approve, invoice PDFs and reminders, offline mode, six home-screen widgets, push notifications and security hardening (SSL pinning, secure storage, biometric lock).
- Led a dashboard UI overhaul and design-system pass on a startup and investor platform: brought investor dashboards to parity with the founder dashboard, redesigned its marketing and campaign landing pages, and fixed build-breaking TypeScript errors.
- Redesigned an internal agency work-management platform end to end on one design system: director and team-lead dashboards, a team capacity board, project and issue views, attendance, dark mode, an email pipeline and tickets; built its CRM landing page with a request-access flow.
- Developed and deployed an AI content-generation agent that automatically produces an Instagram post, a LinkedIn post, and a blog post each day, cutting manual content-creation effort by roughly 40%.
- Built an internal zero-knowledge asset, credential and billing manager end to end (Next.js, Supabase, WebCrypto): QR asset labels, who-has-what allocation, invoice OCR and multi-currency spend tracking, with AES-256-GCM encryption in the browser.
- Shipped 2 features to a multi-tenant affiliate-marketing SaaS platform: UTM auto-tagging and partner-portal link generation, built on Next.js and Supabase.
- Integrated a new analytics dashboard module into an internal campaign-management platform, redesigned its Excel export reporting, and resolved post-integration bugs.
- Worked on the dashboard UI of an AI search-visibility tracker that measures how ChatGPT, Gemini, Claude and Perplexity mention and rank brands.
- Contributed to rebuilding a 45-page K-12 school marketing website, including a mobile-layout overhaul that fixed horizontal-scroll, tap-target, and navigation-menu issues.

PROJECTS

PurrCase - Custom Phone-Case E-Commerce Platform (team project, frontend)

- Built the frontend of a Next.js 14 + TypeScript store: storefront and a 3-step case designer (upload, drag/resize on a phone mockup, pick model, material and finish) with Tailwind CSS and Radix UI.
- Implemented canvas-based cropping so the saved print file matches the on-screen design; the app uses Prisma + PostgreSQL, Kinde auth, Stripe checkout with verified webhooks, and Resend order emails.

SketchRace - Real-Time Multiplayer Drawing and Guessing Game (team project, backend)

- Built the Socket.IO game server: rooms, live drawing sync, word selection, server-timed rounds, turn rotation and speed-based scoring across 10 real-time event types.
- Worked with a teammate whose Next.js 15 / React 19 frontend renders the shared Canvas API drawing surface.

Job Portal - Full-Stack Recruitment Platform

- Built a full-stack job portal with the Next.js 15 App Router and TypeScript: job search with filters, saved jobs, application tracking, a user dashboard and employer job posting.
- Implemented 6 REST API routes with bcrypt password hashing and JWT authentication, and designed an 8-table PostgreSQL schema.

Portfolio Website - shreyashtripathi.in

- Built a prerendered React + TypeScript portfolio with 4 project case studies, structured data and a strict Content Security Policy; raised mobile Lighthouse performance from 30 to 80, with SEO, accessibility and best-practices scores of 100.
- Hosts the Job-Ready Series, 11 interview and job-switch books I wrote (about 4,200 pages), and links my 4 technical articles on dev.to.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C++, Python, SQL
Frontend: React, Next.js (App Router), HTML, CSS, Vite, Tailwind CSS, Radix UI, Responsive Design
Mobile: React Native, Expo (EAS, Router), Android widgets, push notifications
Animation: Framer Motion, GSAP
Backend & APIs: Node.js, Express.js, REST API Design, Socket.IO
Databases & Auth: MongoDB, PostgreSQL, Supabase (Auth, Storage, Realtime)
AI Integration: OpenAI API, Anthropic Claude SDK
Tools & Deployment: Git, GitHub, Vercel, Postman, VS Code

EDUCATION

JECRC University, Jaipur *2022 - 2026*
Bachelor of Technology (B.Tech), Computer Science Engineering - CGPA: 8.1

P.P. Savani School, Ankleshwar, Gujarat
Senior Secondary (12th), CBSE Board

Swami Vivekanand Academy, Ankleshwar, Gujarat
Secondary (10th), CBSE Board

ACHIEVEMENTS & CERTIFICATIONS

- Top 10 Finalist, Smart India Hackathon (national-level competition, 200+ teams)
- Top 10 Finalist, University Ideathon Competition
- Apna College - Alpha (DSA with Java), Certificate of Completion
- Summer Analytics 2024, Consulting and Analytics Club, IIT Guwahati

EXTRA-CURRICULAR INVOLVEMENT

- Active member, Consulting and Analytics Club, IIT Guwahati (Aug 2024 - Present).
- Regular participant in competitive coding contests and hackathons, including national-level and university-level events.

INTERESTS

UI/UX Design, Web Development, Mobile Development, Competitive Programming, AI & Machine Learning
